

The lab has quality Acid and Flammable cabinets built into a custom made work station that houses a host of equipment (a lathe, mill, large vice, laminar flow hood, electronically controlled dehumidifier cabinet, dehumidifier, tool chest, refrigerator, and compressed air tank). To support the massive weight of the flow hood, mill, and lathe only pressure and weather treated 4x4" posts, 2x12" boards, and surface 2-sided 3/4" Birch plywood was used. The lab has a full array of wood and metal working hand tools and power tools.
