

Dr. Sean P. McBride from the Physics Department was requested to provide some interactive session for Upward Bound students over summer 2021. Two hands-on motor Workshop were conducted on June 16th. The students got to build their own motors and the fastest one from each group received a prize. Two rollercoaster workshops were also run on July 1st. All the separate groups of socially distanced mask wearing students enjoyed all sessions. The roller coaster work shop was to prepare them for a potential trip to Cedar Point they were to take some time in the future when permitted. The Society of Physics Students (SPS) sponsored the roller coaster workshop by providing candy to those you volunteered to answer questions. Dr. McBride was assisted by SPS member Alec O'Dell and his undergraduate research student Carrie Cockerham, a undergraduate civil engineering major.
