

Green and White Day 10-12-2018!!

The [Physics Department](#) always has cool demos for you to experience and play with at Green and White Day! Come check us out! Below we see [Dr. Sean P. McBride](#) showing students and President Gilbert the concept of Conservation of Angular Momentum (why a figure skater spins faster when they pull their arms in). We also see Dr. Sachiko McBride explaining the concept of why the shown balloon does not pop even when pressed hard against the shown bed of nails. Come see us or email Dr. Sean P. McBride to discuss career opportunities in Physics!
