

SPS Members Andy Prostor, Mckenzie Granata and Jeremy McCloud assisted Dr. McBride with a Motor Madness Workshop with Logan High School students on March 11th, 2020. In this workshop students got to build Beckman Motors and learned how electric currents, magnetic moments, and applied magnetic fields interact to produce a torque in a motor. The students got to take home their motors home and the winners with the fastest motors received an official Physics Department T-shirt. Everyone enjoyed themselves. The aim for the motor madness workshop was such that the experience would encourage and strengthen the student's interest and curiosity in science and in particular physics (and have fun in the process with a little friendly competition).
